Annual

Maternal Excellence Private Treaty Sale

Watch for details each year!

AM I FULL OF CRAP?

Calf scours are not inevitable. A strong prevention program is non-negotiable. Dependable scour prevention is essential for calf welfare, employee morale and business profitability. The immune system's response to vaccination is variable and unpredictable. That's why giving preformed antibodies instead of relying on a vaccine to stimulate antibody production is so important. I'm all for removing uncertainties. So yes, I stand by this product. (And no, I'm not.)

BULL & FEMALE SALE

Saturday, March 18th, 2023 • Saturday, March 16th, 2024

FTF Magnifico 120J REG #44235486

- Magnifico provides the perfect balance of necessary traits with tremendous eye appeal.
- This fully pigmented Perfecto 84F son has great calving ease, growth, and carcass performance. Homozygous polled.
- His dam is a neatly uddered 369 daughter and he has 4 DOD's in his three generation pedigree.
- Owned with Schoenberger Polled Herefords, Aurora, MO; leased to ST Genetics, Navasota, TX.

Understanding Hereford EPDs

The American Hereford Association (AHA) currently produces expected progeny differences (EPDs) for 17 traits and calculates three profit indexes. AHA's genetic evaluation makes use of a Marker Effects Model that allows the calculation of EPDs by incorporating the pedigree, phenotypic and genomic profile of an animal. Animals that have a genomic profile will be denoted with a GE-EPD logo.

The current suite of Hereford EPDs and profit indexes includes:

Calving Ease — Direct (CE)

CE EPD is based on calving ease scores and birth weights and is measured on a percentage. CE EPD indicates the influence of the sire on calving ease in females calving at 2 years of age. For example, if sire A has a CE EPD of 6 and sire B has a CE EPD of

-2, then you would expect on average, if comparably mated, sire A's calves would have an 8 percent more likely chance of unassisted calving when compared to sire B's calves.

Birth Weight (BW)

BW EPD is an indicator trait for calving ease and is measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average, if comparably mated, sire A's calves would come 3 lb. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty. The figure in parentheses found after each EPD is an accuracy value or reliability of the EPD.

Weaning Weight (WW)

WW EPD is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a WW EPD of 60 and sire B has a WW EPD of 40, then you would expect on average, if comparably mated, sire A's calves would weigh 20 lb. heavier at weaning when compared to sire B's calves.

Yearling Weight (YW)

YW EPD is an estimate of post-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of 100 and sire B has a YW EPD of 70, then you would expect on average, if comparably mated, sire A's calves would weigh 30 lb. heavier at a year of age when compared to sire B's calves.

Dry Matter Intake (DMI)

The DMI EPD predicts the daily consumption of pounds of feed. For example, if sire A has a DMI EPD of 1.1 and sire B has a DMI EPD of 0.1, you would expect sire B's progeny, if comparably mated, to consume on average 1 pound of feed less per day.

Scrotal Circumference (SC)

Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull's own semen quantity and quality, and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty. Yearling sons of a sire with a 0.7 SC EPD should have yearling scrotal circumference measurements that average 0.7 centimeters (cm) larger than progeny by a bull with an EPD of 0.0 cm.

Sustained Cow Fertility

The AHA's new SCF EPD is a prediction of a cow's ability to continue to calve from three years of age through 12 years of age, given she calved as a two-year-old. The EPD is expressed as a deviation in the proportion of the 10 possible calvings to 12 years old expressed as a probability. For example, the daughters of a bull with a 30 EPD would have the genetic potential to have one more calf by age 12 than the daughters from a bull with a 20 EPD. In other words, the daughters from the 30 EPD bull would have a 10% greater probability of having one more calf than the bull with a 20 EPD. This is equivalent to saying that the daughters are 10% more likely to remain in the herd to age 12.

Maternal Milk (MM)

The MM EPD of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. Daughters of the sire with a +14 MM EPD should produce progeny with 205-day weights averaging 24 lb. more (as a result of greater milk production) than daughters of a bull with a MM EPD of -10 lb. (14 minus -10.0 = 24 lb.). This difference in weaning weight is due to total milk production during the entire lactation.

Maternal Milk & Growth (M&G)

The M&G EPD reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of the daughter's progeny weaning weight. A bull with a 29 lb. M&G EPD should sire daughters with progeny weaning weights averaging 19 lb. heavier than progeny of a bull's daughters with a M&G EPD of 10 lb. (29 minus 10 = 19 lb.). It is equal to one-half the sire's weaning weight EPD, plus all of his MM EPD. No accuracy is associated with this since it is simply a mathematical combination of two other EPDs. It is sometimes referred to as "total maternal" or "combined maternal."

Maternal Calving Ease (MCE)

MCE EPD predicts how easily a sire's daughters will calve at two years of age and is measured on a percentage. For example, if sire A has a MCE EPD of 7 and sire B has a CE EPD of -3, then you would expect on average, if comparably mated, sire A's daughters would calve with a 10% more likely chance of being unassisted when compared to sire B's daughters.

Mature Cow Weight (MCW)

The MCW EPD was designed to help breeders select sires that will either increase or decrease mature size of cows in the herd. The trait was developed after years of cow weight data collection and the EPD relates directly to the maintenance requirements of a cow herd. For example, if sire A has a MCW EPD of 100 and sire B has an EPD of 85, then you would expect the females of sire A, if comparably mated, to be 15 lb. heavier at mature size.

Udder suspension (UDDR)

UDDR EPDs are reported on a 9 (very tight) to 1 (very pendulous) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment.

For example, if sire A has a UDDR EPD of 0.4, and sire B has a UDDR EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score better udder suspension in daughters of sire A, compared to sire B.

Test size (TEAT)

TEAT EPDs are reported on a 9 (very small) to 1 (very large, balloon shaped) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment.

For example, if sire A has a test size EPD of 0.4, and sire B has a test size EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score smaller teat size in daughters of sire A, compared to sire B.

Carcass Weight (CW)

CW EPD is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight compared to sires with lower values for carcass weight. For example, if sire A has a CW EPD of 84 and sire B has a CW EPD 64, then you would expect the progeny of sire A, if harvested at the same age constant endpoint, to have a 20-lb. advantage in terms of hot carcass weight.

Rib Fat (FAT)

The FAT EPD reflects differences in adjusted 365-day, 12th-rib fat thickness based on carcass measurements of harvested cattle. Sires with low, or negative FAT EPDs, are expected to produce leaner progeny than sires with higher EPDs. Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Ribeye Area (REA)

REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better-muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Marbling (MARB)

MARB EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat, IMF) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Baldy Maternal Index (BMIS)

The BMIS is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed towards Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on

Carcass Weight which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

Brahman Influence Index (BIIS)

The BIIS is a maternally focused index that is based on a production system that uses Brahman x Hereford cross cows. Progeny of these cows are directed towards a commodity beef market since Certified Hereford Beef® does not accept Brahman influenced cattle. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability in finishing non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep harvested progeny successful for a variety of commodity based programs. This index targets producers that use Hereford bulls on Brahman influenced cows.

Certified Hereford Beef Index (CHBS) The

Certified Hereford Beef Index (CHBS) is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows where all progeny will be targeted for Certified Hereford Beef after the finishing phase. This index has significant weight on Carcass Weight and Marbling to ensure profit on the rail. As well there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter Intake to ensure efficient pounds of growth in the finishing phase. In addition, there is a positive weighting for Rib-eye Area and a negative weighting for Back Fat to maintain desirable Yield Grades. This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.

Missouri

Hereford Association President's Letter

Dear Hereford Breeders, Enthusiasts and Friends,

I want to welcome you to the 2023-2024 edition of the Missouri Hereford Directory! If you are reading this publication, I know that you either are a breeder of Hereford cattle, have interest in learning more about Hereford cattle or know some of the outstanding folks that are involved in our breed, especially here in Missouri!

I invite you to read through this directory to learn more about our association, but more importantly, our members that work hard each day to breed and market the best Hereford cattle. Our association hosts events each year to help highlight and market the cattle of our members. Our annual field day is held in late August on a rotating location basis. Our Missouri Opportunity Sale is held the first Sunday of December each year. We also hold our annual business meeting and award recognition banquet the first Saturday of December each year, in conjunction with the Missouri Opportunity sale.

Two outstanding communication avenues are available to our members. Those include our website, www.moherfords.org, which is an up-to-date location to find information about our events and activities. The other is our quarterly newsletter, Missouri Hereford News. Both resources are professionally presented and timely with their information.

Your state board is made up of nine members, who are geographically located across the state to represent the perspectives of members and breeders in their area. Those board members are listed in this directory. If you do not know the board member from your area, I would encourage you to reach out to them and introduce yourself and begin a conversation about Hereford cattle.

I would be remiss if I did not mention the other strong, active groups that are part of the Missouri Hereford Association family, including the Missouri Junior Hereford Association and the Missouri Hereford Women. We are pleased to work in conjunction with both groups to advance the mission of growing this great breed of cattle!

Thank you for your interest in our breed. Best of luck to you, your families and operations in the future!

BULLS FOR SALE

SPICY HEREFORD SLIDERS

INGREDIENTS

- 1 pound Certified Hereford Beef ground beef (96% lean)
- 9 small hamburger buns, split
- 1 clove garlic, minced
- 1/2 teaspoon ground chipotle chili powder
- 1/4 teaspoon cayenne pepper
- Toppings (optional): Lettuce, tomato, cheese, barbecue sauce, onion, pickles

INSTRUCTIONS

- Tear one hamburger bun into pieces. Place in food processor or blender container. Cover; pulse on and off to form fine crumbs.
- Combine bread crumbs, ground beef, garlic, chili powder and cayenne pepper in medium bowl, mixing lightly, but thoroughly. Lightly shape into eight 1/2 inch-thick mini patties.
- Place patties on grill over medium, ash-covered coals. Grill, covered, 8 to 9 minutes (over medium heat on preheated gas grill, 9 to 10 minutes), until instant-read thermometer inserted horizontally into center registers 160°F, turning occasionally. Evenly top with cheese during last minute of grilling.
- Place burgers on bottoms of remaining eight buns. Top with desired toppings.

What promotes beef to consumers 1 billion times?
YOUR DOLLAR DOES.

See how your dollar helped the *Beef. It's What's for Dinner.* brand reach more consumers in the past year through highly-targeted digital efforts - maximizing your investment and keeping beef top-of-mind.

Much time is taken when making breeding decisions with each individual cow or heifer carefully selected for certain bulls. We concentrate mostly on maternal traits, we realize that pounds are what matters to the commercial cattleman, and we try to have a bull that will match any cow operation.

Did You Know?

Fescue Toxicosis significantly impacts fertility and performance!

- AI'd replacement heifers on high toxic fescue had conception rates of **47%** compared to heifers consuming low toxic fescue with **64%** (Poole, 2019)
- Fescue toxicosis can reduce the effectiveness of supplemental hormones during estrous synchronization
- Suther's **AP5** is a proven proprietary blend of essential oils, prebiotics and binders that significantly reduces the impact of fescue toxicosis for \$.03 cents per day

Suther's Omega Balancer

- The most efficient and effective program to deliver EPA/DHA Omega 3 Fatty Acids to your cattle.
- Cows:
 - Improved embryo retention – 50% greater early embryo retention (Silvestre, 2012).
- Bulls:
 - Increased sperm count and motility
 - Better sperm morphology (Gholami, 2010)
 - Increased scrotal circumference

The Hereford Women of Missouri we provide support to our Missouri Hereford Queen. We also, award a scholarship every year at the Missouri Hereford State Banquet that is held in December at the Missouri State Fair Grounds in Sedalia.

We host a social hour before the Missouri Hereford Banquet each year. We also, provide donuts in the cattle barns before the Open Hereford Show at the Missouri State Fair.

We have three meetings a year. They are held during Missouri Cattleman's Cattle Show, Missouri State Fair, and Missouri Hereford State Banquet and Sale Weekend.

Queen

Check out Hereford Women of Missouri Facebook page for updates on the organization's activities.

If you are interested in being involved in a great organization that supports our youth, we encourage you to become a member.

Taylor McGlothlin

Hereford Women of Missouri dues are \$15 due Jan 1st

PROMOTE EVEN DISTRIBUTION

IMPROVE DELIVERY ACCURACY

IDEAL ADDITIVE CARRIER

Why QLF?

QLF Supplements distribute evenly throughout the bunk allowing for more precise delivery of nutrients and additives to every animal. QLF liquid supplement handling systems also allow for more accurate delivery of supplement to every batch. QLF supplements are an ideal carrier for low inclusion additives and ionophores.

AVAILABLE ADDITIVES:

- MFA Shield Plus Technology
- Rumensin*
- Bovatec*
- Tylan*
- Clarifly*
- Micro Aid*
- Availa*4
- Cattyat*

JUNIOR HEREFORD ASSOCIATION

The purpose of the Missouri Junior Hereford Association is to provide youth with opportunities for fellowship with others, to learn about the Hereford business, develop leadership skills and promote interest among young people in the Hereford breed.

Membership is open to any Missouri youth who is between 7 and 21 years of age. Members meet each year at the Missouri Cattlemen's Association All-Breeds Junior Show, the Missouri State Fair and the Missouri Hereford Association's Opportunity Sale.

Why You Should Join MCA:

- MCA is the only organization in the state solely representing cattlemen.
- MCA offers media training and leadership development to help take your operation to the next level.
- MCA protects your business by working to advance beneficial legislation and killing any overreaching regulations that prevent you from doing your job.

ARE YOU A MEMBER?

The Missouri Cattlemen's Association is a not-for-profit, grassroots, member-driven organization focused on advancing Missouri's beef industry.

Visit www.mocattle.org and click on **JOIN** to start enjoying the benefits of MCA membership.

Advertising Opportunities:

Contact MCA for details about a number of great advertising opportunities in our award winning magazine, *Missouri Beef Cattleman*, or other options like direct mailing and newsletters.

*Our first calf last spring
was born during a freezing rain. I knew
if I didn't bring her in the house,
she'd freeze to death.*

*I was
up all night using my hair dryer to
warm her up. I guess we both fell asleep,
because the next morning my alarm was
a bellowing calf in the bathtub.
- Nicole S., Manawa WI*

KEEP THEM SAFE EVEN BEFORE DAY ONE. From blankets and bottles to heat lamps and hair dryers — there's not much you won't do to protect your newborn calves. But what about your vulnerable, unborn calves? Zoetis is the only one to offer a complete portfolio of reproductive vaccines backed by the Fetal Protection Guarantee. That means when you immunize Mom against reproductive diseases, she extends that superior protection on to her unborn calf. It's a big step in protecting your calves, even before they take their first step.

LEARN MORE AT FETALCALFPROTECTION.COM.

The Zoetis 100% BVD PI-Free Guarantee and the IBR Abortion Guarantee will be administered through Zoetis Veterinary Medical Information and Product Support (VMIPS) at 800-366-5288. Proof of purchase is required. Calves born to BVD PI-positive cows or heifers do not qualify for the guarantee. This guarantee does not apply to, and Zoetis shall not be liable for, any (x) damages caused as a result of the improper handling, misuse or abuse of the vaccines that are the subject of this guarantee, or the willful misconduct or negligence of any third party, or (y) indirect, punitive, special, incidental or consequential damages. Zoetis reserves the right to modify or cancel the terms and conditions of this guarantee.

The Dogwood Difference?

For over 50 years,
DWF seedstock cattle
have been . . .

**Designed
With
Forage!**

Grass-developed bulls go straight to work in the pasture, with no down-time. Never over-fattened, forage-oriented bulls like R4 and C4 stay sound to breed for many years.

Documented real-world stayability:
Natural son of a 14 yr. old cow, sired
by a 10 yr. old pasture herd bull
DWF 18L TIME PRIZE R4 C4

ADE POLLED HEREFORDS

Watch our website for a Spring Sale Date!

APH was part of the group that purchased SHERMAN for \$160,000 from CHURCHILL CATTLE COMPANY & W4 RANCH. We think SHERMAN is a game changer. Homozygous Polled & hence his name "BUILT LIKE A TANK" Take a look at his EPD numbers & you can see the balance. Out of a great cow & cow family.

CE: 3.2 BW: 1.3 WW: 65 YW: 106 MARB: 0.41 REA: 1.19

We think Rooster is one of the best 33Z sons we have raised. Deep bodied, strong down his top and full of muscle. Look at his EPD profile and you will see the balance in this bull. This Dam was Reserve Champion Cow-Calf pair 2015 Junior National out of Trust 100W and Daughter of Remitall Online 122L.

CE: 10.9 BW: 0.4 WW: 60 YW: 101 MARB: 0.09 REA: 0.85

When the results from the 2021 NRSP test from Olsen Ranch were compiled 959G was #1 in the Growth Total. He is top 1% CE, SC, SCF, BMI & BLL. You don't have to give up calving ease for growth with this bull. We have been impressed with the amount of body & muscle of his offspring. A son of NJW LONG HAUL 36E ET & CHURCHHILL LADY 7189E ET the Grand Dam of SHERMAN family.

CE: 15.0 BW: -2.8 WW: 58 YW: 94 MARB: 0.18 REA: 0.57
